Data for this report is provided via the Market Outlook database from Synergos Technologies, Inc (STI).

Market Outlook is based on the following -

- the Consumer Expenditure Survey (CE), a program of the Bureau of Labor Statistics (BLS);
- the U.S. Census Bureau's monthly and annual Retail Trade (CRT) reports;
- the Census Bureau's Economic Census; with supporting demographic data from STI: PopStats data and STI: WorkPlace.

Market Outlook data covers 31 leading retail segments and 40 major product and service lines.

The difference between demand and supply represents the opportunity gap or surplus available for each retail outlet cited on the Market Outlook report for the specified trade area or reporting geography. When the demand is greater than (or less than) the supply, there is an opportunity gap (or surplus) for that retail outlet. In other words, a negative value signifies an opportunity gap where the Consumer Demand is higher than the Market Supply, while a positive value signifies a surplus.

Consumer Demand/Market Supply Index:

- n = 100 (Equilibrium)
- n > 100 suggests demand is not being fully met within the market, consumers are leaving the area to shop
- n < 100 suggests supply exceeds demand, attracting consumers from outside the defined area

# Void Analysis Tenant Requirements

## Sunset Valley, Texas

### Sunset Valley TX

The match scoring algorithm is a proprietary index created by SiteSeer Technologies and provides the user with a visual indicator of how well one's site trade area matches the typical site location profile of each tenant chain. The match score ranges from 0-100 with a score of zero indicating that the chain has never located in a trade area similar to yours and a score of 100 indicating that the chain always locates in a trade area like yours. The algorithm looks at both (a) the percentage of times each chain locates in a trade area similar to yours, and (b) how far each site metric is from the chain's median site profile. The site profile is determined by the types of communities and trade areas where the tenant typically locates; site characteristics such as whether the chain typically locates in primary or secondary retail areas, on major arteries, or in areas of high business traffic; and trade area consumer demographics and behavior.

## **RETAIL MARKET ANALYTICS REPORTS**

Consumer Demographic Profile – An HdL profile uses Synergos Technologies, Inc. (STI) PopStats database with over 1,200 variables with a bottom-up methodology to deliver the highest accuracy level and dependable demographic data. The side-by-side comparison helps users visualize consumer changes as the market size differs.

Household Segmentation Profile – An HdL profile provides a deep understanding of consumer preferences, behaviors, and habits. Utilizing Personix Lifestage database the report segments 70 household clusters into one of 21 Lifestage Groups and ranks the top 10 individual clusters allowing the user to identify the most concentrated groups with ease. The document includes links to the Personix Online Guide, which provides an in-depth summary of each group and cluster.

Employment Profile – An HdL profile provides insight on the employment market located within a specific trade area. The profile breaks down industry groups, as well as Occupational sectors, to allow an accurate evaluation of the daytime population and workforce for the defined region. Understanding the types of businesses and the types of workers that are positioned near key areas of interest can greatly influence decisions.

Consumer Demand and Market Profile (GAP Analysis) – An HdL profile examines opportunity-surplus gaps across 31 retail segments and 40 major product and service lines to provide insight on potential opportunities within a defined market. The assessment evaluates the overall trade area, not just jurisdictional boundaries, making it a more useful tool to assist in development planning, recruitment strategies, and overall market analysis.

Void Analysis (Optional) – An HdL analysis provides trade area supply and demand (surplus and leakage) data for nearly 60 retail store and product categories to identify which goods and services are in demand in your trade area. Unlike traditional approaches that only look at which tenants are missing from the trade area, an HdL void analysis also scores your site against the typical location profile of thousands of potential brands. The tool enables quick evaluation opportunities to show prospects that a site presents a strong business opportunity. The void analysis also determines which co-tenants they co-locate with and whether your location is a logical fit for their network, which leads to more vibrant retail trade areas and an optimized sales tax base.
